(54) Title: TEXTILE PRODUCT WITH IMPROVED ABRASION RESISTANCE AND PROCESS FOR THE PRODUCTION THEREOF

(57) Abstract: The invention relates to a textile product in which a three-dimensional pattern is applied on a textile substrate having a certain abrasion resistance, whereby the three-dimensional pattern covers at least 15 % of the area of the textile substrate, so that the abrasion resistance of the textile product lies beyond the abrasion resistance of the textile substrate. As a consequence, the abrasion resistance of a textile substrate can be improved by a process in which a textile substrate web having a certain abrasion resistance is provided and a three-dimensional pattern covering at least 15 % of the area of the textile substrate web is applied thereupon.
